Licensed to bear the AMCA Seal for Sound and Air Performance

**USS119A**  
**May 1999**

U.S. Fan International® certifies that the USTB Series fans shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and AMCA Publication 311 and comply with the requirements of the AMCA Certified Ratings Program. For air performance data refer to catalog USC119.

## INTRODUCTION

This catalog should be used in conjunction with the USC119 Catalog which provides the air performance data.

This catalog uses procedures in accordance with AMCA Standards. Tests have been conducted using AMCA Standard 300, Figure 2, Fan Inlet Sound Testing. Sound power level ratings are in decibels, referred to  $10^{-12}$  watts calculated per AMCA Standard 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data". Values shown are for inlet sound power levels ( $L_{wi}$ ) for installation type 'B'; Free inlet, ducted outlet. Ratings do not include the effects of duct end correction.

Specific sound power is the means by which a fan's overall sound can be reduced to a set of base numbers which still represent the "signature" of the original fan.

$$L_{wi} = L_{wki} + L_{wf} - E$$

Where:

$L_{wi}$  is Inlet sound power of fan

$L_{wki}$  is Inlet specific sound power for a particular fan design

$L_{wf}$  is Capacity fraction which is  $10 \log (\text{CFM}) + 20 \log (\text{static pressure})$

$E$  is Correction for fan size

The specific sound power of a fan changes with operating point location on the fan curve. This is done using the term VP/SP in that regardless of speed, fan size or density, the VP/SP ratio remains constant and defines the same corresponding operating point for the base fan as well as the new fan.

The capacity fraction ( $L_{wf}$ ) and VP/SP ratio can easily be calculated or determined using Tables I and II. It is important to note that the VP/SP ratio requires both the VP and SP values to be at the same density. Because it is necessary that SP values be known at standard conditions in order to use catalog USC119, it is convenient to determine the VP/SP ratio at standard conditions using Table I. However, the acoustic energy (capacity fraction -  $L_{wf}$ ) is a function of the SP at the actual operating conditions of the new fan. Therefore, use the SP corresponding to the actual operating conditions in Table II or you will obtain the wrong values of sound power.

## SAMPLE CALCULATION

A size 60 fan must deliver 35,680 CFM at  $1\frac{1}{2}$  inches wg (373 Pa) static pressure. The fan must perform at an altitude of 4000 feet (1219 m) with air entering the fan inlet at  $150^{\circ}\text{F}$  ( $65.5^{\circ}\text{C}$ ).

### 1. DETERMINE THE AERODYNAMIC RATING

The aerodynamic rating is found using the procedures found in the USC119 Catalog. The final rating at actual operating conditions is:

35,680 CFM ( $16.84 \text{ m}^3/\text{s}$ ), 1.5 inches wg SP (373 Pa), 481 RPM, 13.11 HP (9.8 kW).

### 2. DETERMINE THE VP/SP RATIO AT STANDARD CONDITIONS

The inlet velocity may be read directly from the catalog or calculated using the inlet area at the top of the page. The inlet area is 35.61 sq. ft. ( $3.3 \text{ m}^2$ ).

$$\text{Inlet velocity} = \frac{35680 \text{ CFM} (16.84 \text{ m}^3/\text{s})}{35.61 \text{ sq. ft.} (3.3 \text{ m}^2)}$$

= 1000 FPM (5.08 m/s) and

$$\text{Velocity Pressure VP} = \frac{(1000 \text{ FPM})^2}{4005} = 0.062 \text{ in. wg (15.5 Pa).}$$

The SP at standard conditions is 2.0 in. wg (497 Pa).

$$\text{The VP/SP ratio} = \frac{0.062 \text{ in. wg. (15.5 Pa)}}{2 \text{ in. wg. (4.97 Pa)}} = 0.031 \text{ or}$$

from Table I, for 1000 FPM and 2.0 inches wg., the VP/SP is .03.

### 3. DETERMINE THE CAPACITY FRACTION ( $L_{wf}$ )

The static pressure at the actual operating conditions is 1.5 inches. By using the capacity fraction formula or Table II the  $L_{wf}$  is 49 dB.

### 4. DETERMINE THE INLET SPECIFIC SOUND POWER ( $L_{wki}$ ) FOR THE FAN SIZE AND SPEED DESIRED.

The size 60 fan will run at 481 RPM and operate at a VP/SP ratio of .03. For the listed speed NEAREST the desired speed and interpolating for values of VP/SP, determine the values of  $L_{wki}$ .

For a speed of 500 RPM and a VP/SP of .03, the values of  $L_{wki}$  are:

| OCTAVE BAND | 1  | 2  | 3  | 4  | 5  | 6  | 7  | 8  |
|-------------|----|----|----|----|----|----|----|----|
| $L_{wki}$   | 50 | 37 | 32 | 28 | 24 | 20 | 18 | 16 |

### 5. DETERMINE INLET SOUND POWER LEVELS ( $L_{wi}$ ) dB re $10^{-12}$ Watts

| OCTAVE BAND | 1  | 2  | 3  | 4  | 5  | 6  | 7  | 8  |
|-------------|----|----|----|----|----|----|----|----|
| $+L_{wki}$  | 50 | 37 | 32 | 28 | 24 | 20 | 18 | 16 |
| $+L_{wf}$   | 49 | 49 | 49 | 49 | 49 | 49 | 49 | 49 |
| $-E$        | -1 | 0  | 0  | 0  | 0  | 0  | 0  | 0  |
| $L_{wi}$    | 98 | 86 | 81 | 77 | 73 | 69 | 67 | 65 |
